

TECHNICAL INFO ROMAN BLINDS

Description

- Stylish modern look
- Cord lock or chain driven
- Low maintenance
- Provide maximum privacy
- Great insulation ability

FABRIC TYPES

Blockout

Blockout fabrics offer the ultimate level of privacy, day and night while helping to insulate the room. Blockout fabrics offer room darkening capabilities. They are ideal for bedrooms and home theatre/ TV rooms. PLEASE NOTE: Roman Blinds may have a small amount of light coming through the sewing lines of the blind. The weight of larger blinds will emphasise the amount of light that can pass through these small holes. We use market leading manufacturing technology to minimise the size of all sewing holes.

Light Filtering

Light Filtering fabrics screen out harsh light, but do not allow a view through. They bring texture or patterns to light coming into a room whilst providing daytime and night time privacy.

Sunscreen

Sunscreen fabrics allow for heat and light control while maintaining your view. Perfect for reducing glare and heat in a room exposed to the sun. Layer with Blockout fabrics for night time privacy.

Minimum & Maximum Sizes Available

Width: 300mm – 2700mm (restrictions apply to some fabrics)

Drop: 600mm – 2700mm

Please note: All blind widths over 2400mm are considered oversized. Although we utilise the latest technologies in manufacturing, blinds of this size run the risk of a slight wavering to the fabric along the pockets. This is considered standard for sewn pocket roman blinds of these dimensions and is not considered a manufacturing fault. As a result no warranty claim against this aspect of the product will be considered.

Mounting

We do not offer Roman Blinds with a recess mount option and recommend that blinds are to be face mounted only. This is standard practice within the Australian Soft Furnishing industry for the following reasons:

- The cord control for a Roman Blind sits behind the fabric. Therefore if a Roman Blind is installed in a recess it would be necessary to push the fabric of the blind to one side in order to access the cord. Over time this will cause damage to your Roman Blind.
- The fabric of a Roman Blind will take time to settle and if installed within a recess will over time become too long for the recess.
- Most windows aren't square and a Roman Blind installed in a recess will most likely look crooked and without an even gap on its sides.

Please note: If you purchase a Roman Blind with the intention of installing in a window recess it will not be covered by our 5 Year Warranty for any of the reasons listed above.

Cleaning

- Do not use cleaning products to clean your blinds as they may damage the fabric or compromise the colour.
- General dusting is suitable and should be done regularly to maintain your blinds.
- For spot cleaning, remove as much dust as possible before wiping with a damp cloth.
- Refer to individual fabric properties for additional cleaning instructions.

TECHNICAL INFO ROMAN BLINDS

FEATURES

Headboard

Our standard headboard for a Roman Blind is 40mm.

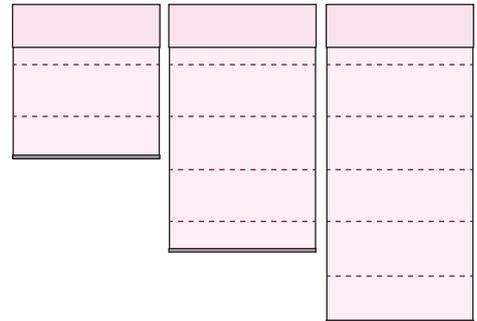

Dropping & Settling of Fabric

After installing your Roman Blind, it may appear that the drop is shorter than what was ordered. This is due to the fabric needing time to drop and settle out of the folds. The time it takes for a blind to drop and settle will be dependent upon the size and weight of the blind. In some cases this may take a few weeks to occur.

By following our measuring instructions you will ensure that your Roman Blinds will fit as desired.

Lining up blinds

The drop of the blind determines the size of the pockets on a Roman Blind. For this reason, if you have multiple Roman Blinds in the same room with different drop lengths and would like the pockets to match, you will need to select this option in the order section for Roman Blinds. This will mostly result in a smaller pocket at the bottom of the shorter Roman Blinds.

NOTE: This product is recommended for domestic use only and is not recommended for commercial applications. All products supplied by DIYonlineblinds.com.au include all installation components and detailed instructions to ensure the perfect fit.

WARNING CHILD SAFETY WITH LOOPED CORDS, CHAINS & BEAD CORDS

Young children can strangle in the loop of pull cords, chain and bead cords, and cords that run through window coverings. They can also wrap cords around their necks. To avoid strangulation, keep cords out of the reach of young children. Also,

1. Install safety devices that remove the cord loop or reduce access to cords, and
2. Move cots and furniture away from window covering cords.

The tension device reduces the hazards of strangulation or entanglement by limited access to the cord or bead chain. Anchor the device with the cord or bead chain to the wall or floor so young children cannot pull the cord or bead chain around their necks. Always keep cords out of the reach of young children.

WARNING REGARDING CLEATS: Cleats should be mounted at a sufficient height, so as to keep cords out of reach of young children. Cords must be fully wrapped around the cleat at all times. Always keep out of the reach of young children.

WARNING FOR CORD RELEASE DEVICE: This cord release device reduces the strangulation hazard in the pull cord by removing the permanent loop. The cords should not be tied together and the cords should not be twisted around each other when the device is assembled. This device will not prevent strangulation if young children wrap pull cords around their necks. Always keep cords out of reach of young children.
